

Target

ANCHOR LIFE aims at enhancing the awareness of port stakeholders on the topic of noise pollution.

The following actions will be implemented:

- Development of rewarding "Figures of Merit" in port noise governance (port of Livorno)
- Design and installation of a Smart Port Noise Monitoring System (port of Patras)
- Preparation of a Guideline defining a common approach in port noise monitoring and assessment (port of Melilla)

Port of Livorno

Actions

Number of entities/individuals reached/made aware
Number of website visitors resident in/outside the EU
Download of "Figures of merit" Requirements
Download of Guidelines
Number of entities changing behaviour...

Policy

ANCHOR LIFE is aimed at implementing the EU Legislation Environmental Noise Directive (END) 2002/49/EC, i.e. contributing to the achievement of a high level of health and environmental protection against noise.

ANCHOR LIFE will develop innovative management tools to reduce noise emissions due to port activities (i.e. different docking schedules)

The project will elaborate a set of guidelines for port expansion noise impact assessment for Port Authorities and Environmental Agencies, to be replicable all over Europe.

Port of Melilla

After Life

The "Follower Platform", with its guidelines, will remain active and opened to all the stakeholders.

The development of "Figures of Merits" governance on noise will be carried on even after the end of the project.

The Smart Port Noise Monitoring System – SPNMS in Patras will be kept in place, collecting and sharing data with the target audience (i.e. Port Authorities, citizens, Municipalities, Environmental Agencies).

The noise impact assessment of the expansion of Melilla port will support designers and decision makers in the actual realization of the project (also for other ports).

Port of Patras
