1. Overall objectives of ANCHOR LIFE

Communicating and **disseminating** research outcomes on noise pollution generated by urban ports thus affecting nearby territories and communities

Raising awareness of decision makers and professionals representing Port Authorities, Public Administrations, Private Sector Operators, Academia and Citizens living in port cities

Engaging stakeholders towards mobilization and **replication** in all European Countries.

2. Main outcomes

Developing an incentive scheme for the private sector operating in the ports of Livorno, Piombino and Portoferraio (Italy), **“Figures of Merit”**;

Designing and installing a **Smart Port Noise Monitoring System (SPNMS)** in the port of Patras (Greece)

Developing updated **Port Noise Impact Assessment (PNIA) Guidelines** for the definition of a common approach in port noise monitoring and assessment, also considering the new algorithms defined by the European Directive 2015/996. Port of Melilla (Spain)

3. Replication objectives

Engaging stakeholders for direct involvement to perform consistent **environmental assessment** and **action planning** for sustainable development

Building, disseminating and replicating governance tools for port noise management

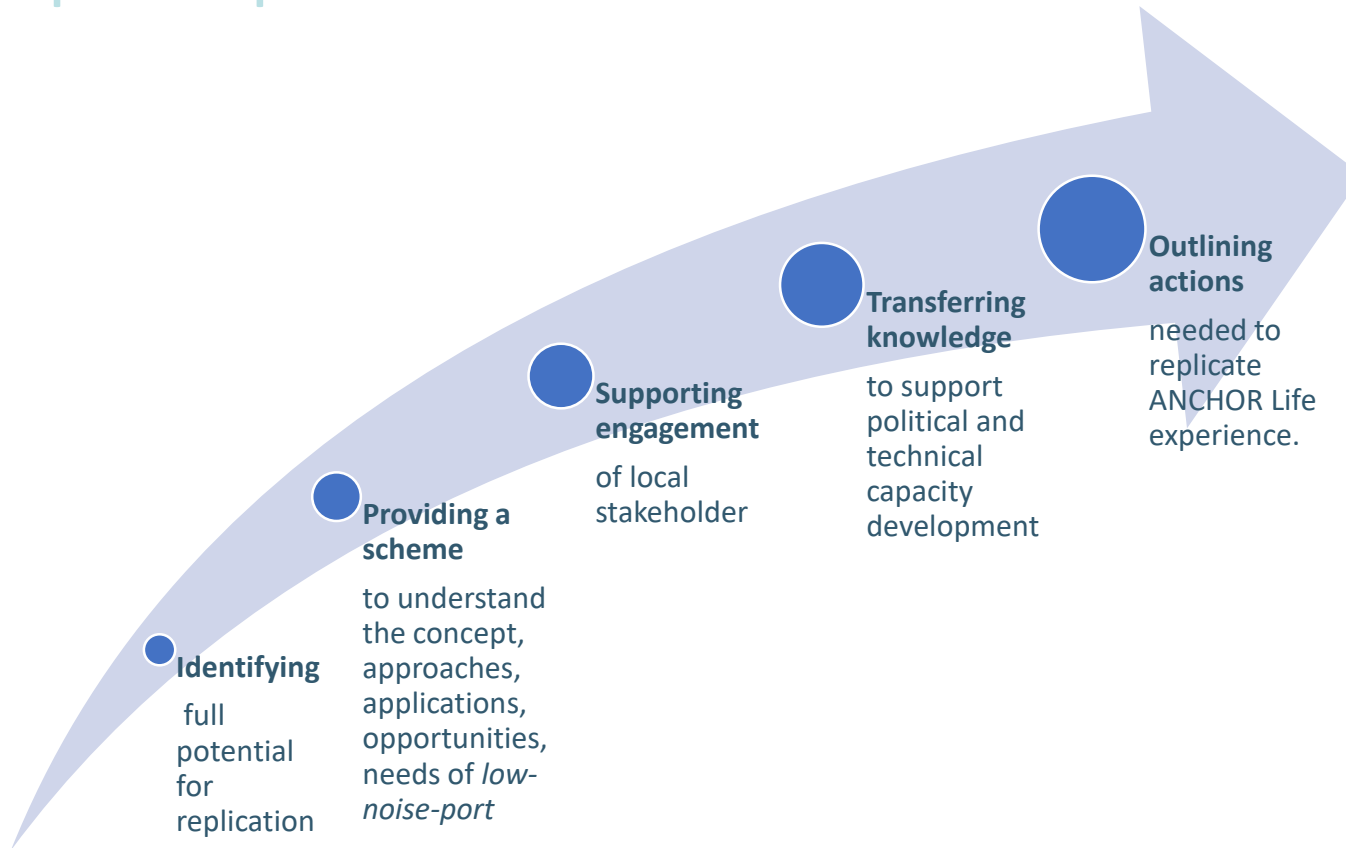

Transferring knowledge to the **“ANCHOR Followers’ Platform”**, a growing group of port management related stakeholders

Evaluating the effectiveness of this dissemination process through a set of Communication & Dissemination KPIs.

4. Replication path

5. ANCHOR LIFE Webinars: objectives

Disseminating operational knowledge to a wide community of stakeholders at EU level, in the areas of:

- a) Policy making***
- b) Technical-regulatory***
- c) Smart technology***

6. Target Audience

ANCHOR Followers Platform (as of today):

Port Authorities: (3)

Municipalities and their associations (3)

Associations of private sector operators (1)

Chambers of commerce (1)

Regional environmental protection agencies (1)

Non-European local governments (1)

Long term audience:

Designated competent authorities and their affiliate entities in EU Member States.*

** Cfr. "Evaluation of Directive 2002/49/EC relating to the assessment and management of environmental noise Final Report – Country Fiches", 2016*

A decorative blue waveform graphic on the left side of the slide.

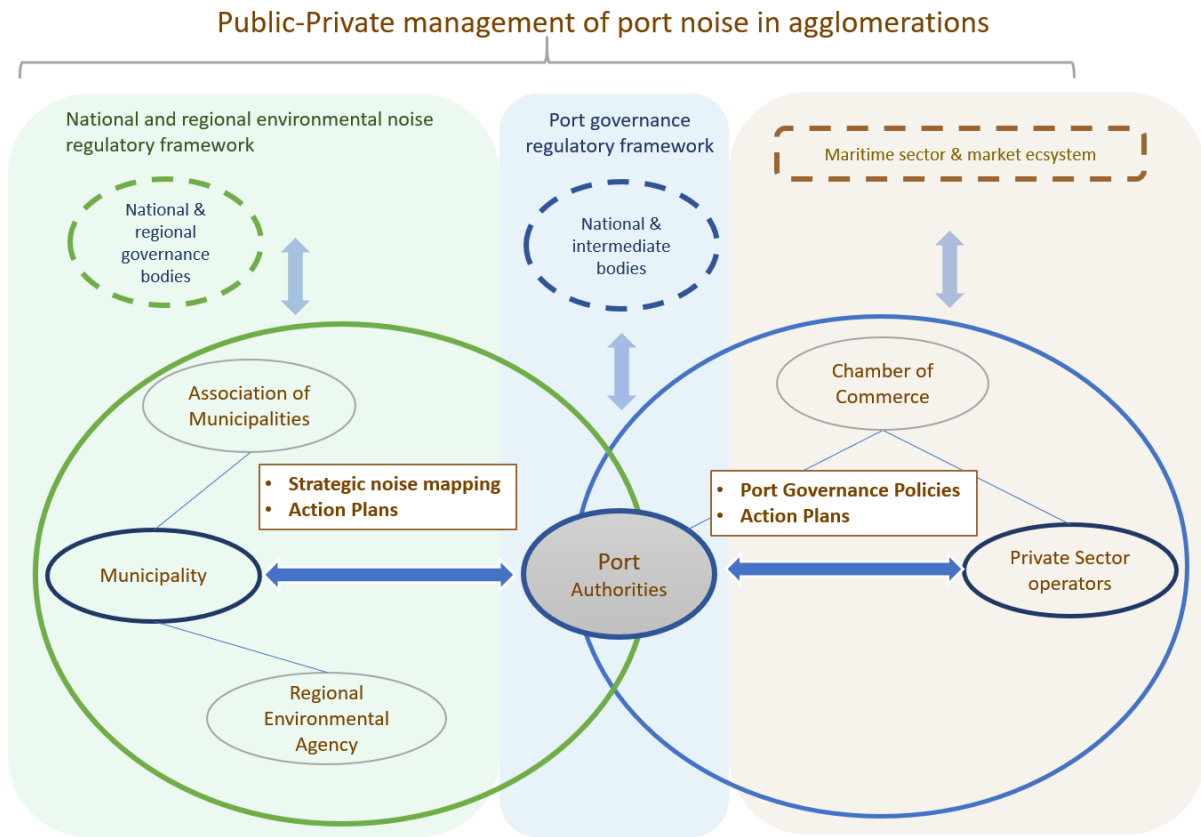

7. Background framework: conceptualisation of stakeholders relative positioning

Port noise management is a multi-stakeholder process, END directive stimulates public-private territorial management.

Port Authorities are at the center of strategic action. Noise pollution management in agglomerations such as port cities implies:

- National, regional or intermediate regulatory frameworks by sector (END directive in member states, port governance, maritime sector and maritime business ecosystems).
- Implementation of the **Strategic Noise Mapping** and **Action Plans**, as a result of coordinated noise management activities in *agglomerations*, linking Municipalities, Port Authorities and the private sector, Port Authorities acting as an interface between urban planning and investment.

8. Conceptual Framework: diagram

9. Drawing key messages from ANCHOR LIFE structured knowledge

	Action B.1 – Figures of Merit	Action B.2 – SPNMS	Action B.3 - PNIA
<p>PRIMARY LEVEL (TECHNICAL) : Analysis focused on company employees, as individuals or as members of specific production groups.</p>	<p><u>Know that:</u> Implementing the “Figures of Merit” scheme involves multidisciplinary management and technical-economic analysis skills</p> <p><u>Know how:</u> To define technical-scientific competences to integrate noise mapping with the analysis of main issues affecting port noise and port competitiveness To apply a methodology for writing a “Analysis of the impact of noise on port competitiveness and Proposal on port concession policy”</p>	<p><u>Know that:</u> Creating a s SPNMS is an effective assessment, communication and interaction tool that allows to perform advanced diagnosis and control of sound pressure data. In conjunction with a Noise Map, a SNPMS alerts both citizen and authority of the possibility of an acoustic impact in residential areas in proximity.</p> <p><u>Know how:</u> To design the technical features of a SPNMS and plan for its purchase, installation and operation of all its components.</p>	<p><u>Know that:</u> difference between the outcomes of a noise propagation calculation performed with the algorithms defined by the 2015/996 Directive and the one of the old Annex II of the END may be relevant.</p> <p><u>Know how:</u> To perform an updated procedure to collect input data for noise mapping activities in ports, in compliance with the END taking into account the updates contained in the 2015/996 Directive.</p>
<p>SECONDARY LEVEL (ORGANISATIONAL): Analysis focused on the organization level and its needs for adaptation and change to achieve strategic objectives.</p>	<p><u>Know that:</u> implementation of an incentive scheme should be bound to measurable outcomes and positive impact can be forecast is a governance process involving sequenced decisions by coordinated stakeholders and office bearers.</p> <p><u>Know how:</u> to analyse the process in phases and how to conduct a management process aiming at achieving actual noise reduction goals</p>	<p><u>Know that:</u> A SPNMS can be a lean and powerful tool to improve communication between port authorities and territorial stakeholders in a dynamic way.</p> <p><u>Know how:</u> To plan for and to set up a SPNMS allowing co-management of noise emission jointly by port-authority, private sector operators and local communities.</p>	<p><u>Know that:</u> the realization of a noise mapping activity should not be separated from the realization of a noise action plan. If these two activities are performed together, the risk of incompatibilities between noise simulations and noise assessments will be minimum.</p> <p><u>Know how:</u> to plan and carry out a Port Noise Impact Assessment in compliance with END.</p>

10. Translating key messages into webinar modules

Date	Leading partner	Title
10 February 2021	ISPRA	Introduction Part 1: Project presentation, stakeholder engagement strategy Part 2: Presentation of individual modules
March 2021	MUPAT	Intermediate meeting #2 in Patras Status update of the project
May 2021	ADSPMTS	"Figures of Merit" for port noise governance. Planning effective incentives for private sector operators. Part 1: what it is, when it is fit, what are the challenges and the benefits. Case study: SWOT Analysis of the ANCHOR experience Part 2: Design of a "Figures of Merit" scheme step by step.
June 2021	MPA/CIRIAF	Raising awareness and knowledge transfer on for port noise environmental impact assessment Part 1: NoMEPorts methodology and European Directive 2015/996/EC. Critical review and technical scientific conclusions. Part 2: Technical session on the "Updated Guidelines for a Port Noise Assessment method"
November 2021	MUPAT	Developing participation through a Smart Port Noise Monitoring System Part 1: SWOT, Technical design and considerations Part 2: Stakeholders participation
January 2022	ADSPMTS	"Figures of Merit" for port noise governance. Planning effective incentives for private sector operators. Part 1: what it is, when it is fit, what are the challenges and the benefits. Case study: SWOT Analysis of the ANCHOR experience Part 2: Design of a "Figures of Merit" scheme step by step.
February 2022	MPA/CIRIAF	Raising awareness and knowledge transfer on for port noise environmental impact assessment Part 1: NoMEPorts methodology and European Directive 2015/996/EC. Critical review and technical scientific conclusions. Part 2: Technical session on the "Updated Guidelines for a Port Noise Assessment method"
March 2022	MUPAT	Developing participation through a Smart Port Noise Monitoring System Part 1: SWOT, Technical design and considerations Part 2: Stakeholders participation
